

3 Reasons a Cloud-Based HCM Makes Sense

isolved™

Moving to the Cloud

For a Sunnier Outlook

It's not uncommon to use a variety of clunky processes and systems to perform everyday HR tasks. These processes can be quite manual, and the systems typically require multiple logins, workflows and data entries. Making it even more complicated is the tools that don't natively integrate with technology platforms that are being used by business partners.

Disjointed workflows may leave HR teams feeling gloomy and bracing for unexpected disruptions. But, **the cloud can provide a sunnier experience.**

This eBook highlights three reasons why a cloud-based human capital management (HCM) platform is worth the investment:

- 1 Simple and Secure Access to Data
- 2 Flexibility that's Far Reaching
- 3 An ROI that Makes Sense (& Cents)

First up: *Simplicity and Security*

Simple and Secure

Way to Access Data

Swapping clunky tech tools for a cloud-based HCM gives access to all the data you need from a single source. This means the days of remembering multiple logins and passwords can be put in the past. A single source of truth also reduces the risk of human error and improves productivity because data only needs to be entered into the system once.

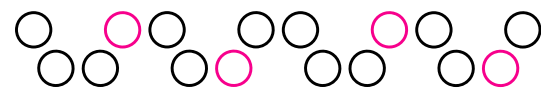

In addition to simplicity, the cloud provides security – which is of upmost importance to the majority of business leaders. In fact:

The cloud can help ease security concerns. HCM platforms that are hosted with a top cloud service provider have multi-layered defenses that safeguard critical information. Additionally, HCM platforms should have formal and comprehensive programs put in place to:

- Ensure security of data
- Protect against security threats
- Prevent unauthorized access

Since data is stored off-site, human risk is also reduced. With a lack of physical access to files, the likelihood of someone on premise finding sensitive information and using it in a negative way decreases.

Coming Up Next: *Flexibility*

More than half of HR leaders are considering switching HCM platforms within the next 12 months. The top reason why? **Security issues.**

Flexibility

That's Far Reaching

The pandemic highlighted the importance of flexibility within an enterprise. But outside the need for flexible technology that can support remote workforces, your HR department also needs technology that is scalable and can integrate with other tools and services. A cloud-based HCM can do all of this.

Cloud platforms with open application programming interfaces (APIs) can be customized to fit specific business needs, which may include integrating with technology used by other business partners. Research shows that 360 integrations are important for HR teams. In fact:

14 percent of HR leaders say the ability to integrate with other technologies is their top expectation for an HCM platform.

This data highlights the importance of flexible technology that supports integrations and is built to fit unique business needs. Not only is this vital for the short-term, but the long-term too. After all, flexible technology will also be scalable – meeting the needs of HR teams' current working environments and having the ability to adapt to future needs.

Last, but not Least: *Return on Investment*

An ROI

That Makes Sense (& Cents)

A cloud-based HCM platform makes sense not only because of the simplicity, security and agility it offers, but also the impact it can have on a business's bottom line. In fact:

325%

is the average return on investment (ROI) for organizations moving from manual processes by investing in modern, cloud-based HCM solutions.

Source: Nucleus Research <https://nucleusresearch.com/research/single/modern-hcm-delivers-more-than-100-roi/>

Some of the ways a cloud-based system can impact ROI include:

- Boosted productivity with single system and login
- Minimal downtime needed to administer regular updates
- Engagement management tools increase collaboration
- Learning management capabilities can improve skillsets and retention
- Self-service functionality eliminates the need for manual processes

While this is by no means an extensive list of cloud advantages, it does identify some of the areas where the cloud can impact businesses immediately. Plus, a comprehensive cloud platform will keep common HR tasks like time and payroll in sync - truly simplifying common administrative tasks so more time can be spent on strategy.

The most challenging business is the business of people.

Make it easier with isolved.

isolved is an employee experience leader, providing intuitive, people-first HCM technology. Our solutions are delivered directly or through our partner network to more than five million employees and 145,000 employers – who use them every day to boost performance, increase productivity, and accelerate results while reducing risk. Our HCM platform, isolved People Cloud, seamlessly connects and manages the employee journey across talent management, HR & payroll, workforce management and engagement management functions. No matter the industry, we help high-growth organizations employ, enable and empower their workforce by transforming employee experience for a better today and a better tomorrow. For more information, visit www.isolvedhcm.com.
